

PF-PRINTMERGE SAMPLE

This sample form serves as a tutorial on the use of PF-PrintMerge. In this form, you will find the various Acrobat's field types supported in a print merge: Text, List Box, Combo Box, Check Box and Radio Button.

This form has 2 pages and the second page does not have any form field. When merging, PF-PrintMerge will include no-field pages of a form in the resultant file.

When using this sample form, we recommend that you also use our sample database "Sample.pdf". However, you may also use any target databases, once you are familiar in the use of PF-PrintMerge.

TEXT FIELD

CHECK BOX

RADIO BUTTONS OF ONE RADIO GROUP

LIST BOX

COMBO BOX

This is page#2 of a 2-page form. This 2nd page does not has any form fields.

To experiment with PF-PrintMerge, you may want to add fields to this page. We recommend that you first make a copy of Sample.pdf and make changes on the copy only, and then print merge using that copy.
